

## The nation's leading solution for integrating PDMP data, analytics, insights, and resources into your EHR

With Appriss Health's PMP Gateway solution, providers can access multi-state prescription drug monitoring program (PDMP) information within the prescriber's and dispenser's daily workflow. PMP Gateway increases utilization of PDMP information at the point of care through integration with most electronic health record (EHR) and pharmacy management systems. PMP Gateway currently delivers PDMP integration into the workflow of **630,000+ clinicians at nearly 92,000 facilities across the country.**

### The Solution

PMP Gateway is a managed service and comprehensive connectivity and clinical decision support solution that enables access to data, analytics, tools, and resources from PDMPs within care team workflows in real-time, at the point of care, to improve patient safety and outcomes. It interoperates seamlessly via native integrations with all leading EHR and pharmacy management platforms; PMP InterConnect, which facilitates access to multi-state data; as well as NarxCare, the premier platform for addressing substance use disorder (SUD).

**For care teams,** PMP Gateway enables efficient access to a patient's PDMP information and more within the workflow of the EHR. Clinicians previously needed to log into separate websites to retrieve a patient's PDMP information from the state database and then cross-reference that data with a patient's health information in disparate systems. PMP Gateway saves physicians, on average, two to five minutes per patient reviewing a patient's PDMP report.

**For health systems and physician practices,** PMP Gateway simplifies integration of PDMP information into health IT systems. It saves healthcare providers the effort of building and sustaining individual integrations with each state PDMP by providing a single access point to multi-state data with existing integrations to more than 130 EHRs, including all of the major vendors. With PMP Gateway, systems gain the benefit of a rules-driven data-integration service and platform that supports multiple protocols and multiple states with just one interface. The service is fully supported 24/7/365 by Appriss Health, and any future changes required by the health system are managed and supported by Appriss Health for all connected states.

Additional features and functions include:

- Detailed audit trail
- Verification of user registration with PDMP
- Self-service configuration for custom PDMP rules/regulations
- Single point of access for systems management
- 24/7 technical support
- Standards-based platform approach

### By the Numbers:

- Live implementations in **39 states**
- More than **82 million transactions** processed per month
- **Twenty states** have deployed enterprise licenses to **ALL prescribers and dispensers** in their states

*As of February 2020*

# The vast majority of the nation is integration-ready today with PMP Gateway.

With PMP Gateway, Appriss Health has set the industry standard of best practices for clinical workflow integration across the nation.

What differentiates PMP Gateway from alternatives is its full support of state requirements for the integration of PDMP information, which often includes more than just medication history, into EHRs and pharmacy systems, as well as its focus on impacting the full scope of the opioid epidemic, not just prescription drugs.

## **Up front. Every patient. Every time.**

PMP Gateway integrates directly into the patient record so that PDMP data is available for every patient encounter with one click. Advanced substance use disorder platforms are accessible directly within workflow for authorized prescribers and pharmacists nationwide.

## **Reducing Clinical Burden.**

Clinicians save, on average, two to five minutes per patient reviewing a patient's PDMP report and associated content by using PMP Gateway. By delivering this critical clinical decision support

information to prescribers and pharmacists in their clinical workflow, Appriss Health is reducing the physician burden of prescribing and dispensing controlled substances by as many as hundreds of millions of minutes per month, while cutting costs and improving patient care and safety.

Prior to PMP Gateway, prescribers and pharmacists had to log into separate systems to query patient information which took important time away from patient care.

## **Compliance.**

PMP Gateway helps providers easily adapt to and comply with PDMP requirements.

## **Proven Performance.**

To meet the needs of the state PDMPs, EHR and pharmacy management system vendors, pharmacies, hospitals and other approved healthcare entities, PMP Gateway is a highly scalable integration solution that ensures the highest performance, security, and end user support.

## **What Providers Are Saying About PMP Gateway:**

"We're arming our providers with more robust, point-of-care access to the state's prescription monitoring program to support the safe and responsible treatment of pain, and to better manage substance use disorder."

– Thomas Sequist, MD, MPH, Chief Quality and Safety Officer, Mass General Brigham (formerly Partners HealthCare)

## **About Appriss Health**

Appriss Health provides the nation's most comprehensive platform for opioid stewardship and the early identification, prevention, management, and treatment of substance use and mental health disorders. We provide state government agencies with the most advanced repository of controlled substance dispensing information, facilitate rapid treatment referrals, and deliver real-time clinical decision support, critical insights, and interventions to physicians, pharmacists, social workers, and other care team members through millions of patient encounters each year. Our solutions enable healthcare providers to better assess and manage clinical risk to positively impact patient outcomes and safety all across the United States.
