IMPACT

Reducing Opioid Misuse

Bringing Life-Saving Data to the Forefront

Appriss Health offers the most comprehensive platform for early identification, prevention, and management of substance use disorder—enabling providers to make more informed prescription decisions.

▶ Critical Prescription Data Informs Providers

We share Prescription Drug Monitoring Program (PDMP) data across states and their various facilities, integrate this real-time data at the point of care, and provide clinicians and pharmacists with easy-to-view and insightful analytics and visuals.

▶ Different Benefits Deliver Different Results

The benefits we provide are two-fold. First and foremost, we play a role in improving public health—enabling providers to enhance patient care and helping state administrators fight the opioid epidemic. And second, our in-workflow EHR data integrations and real-time data displays save between four and 10 minutes per patient interaction—creating efficiencies around business operations.

▶ A Measurable Impact Motivates Our Team

Time and again, we make a significant impact. Working with a major health system in a state with an opioid prescription rate 55% higher than the U.S. average, opioids prescribed by providers decreased 51% year-over-year—bringing the health system in line with the national average. The solution also allowed providers to access PDMP data directly in their EHR workflow, eliminating the need for delegates to absorb this previously time-consuming step. It is this story, and many others like it, that continue to motivate us.

By The Numbers

The Magnitude of Prescription Opioid Misuse

11M

misusers in U.S. annually

1,000

people treated in ED daily

\$78.5B

economic burden annually
